

East Goshen Township

Sustainability Advisory Committee

“The **transportation** sector generates the largest share of **greenhouse gas emissions.**” - EPA.

That’s something to think about when considering a car and other transportation.

Please join the [Sustainability Advisory Committee](#) (“SAC”) for their
5th Online Free Seminar
Wednesday September 23 from 7 pm - 8 pm
to discuss an Introduction to Electric Vehicles.

What a way to springboard into [National Drive Electric Week!](#)

As we aim to reduce transportation emissions, we will hear from [Morgan Folger](#) who directs

[Environment America’s *Destination: Zero Carbon*](#), a campaign to ensure all new cars and trucks are electric by 2035. Her expertise lies in EVs and global warming solutions, and she has authored reports on air quality and clean transportation.

She will be discussing:

- * Why electric vehicles are important to solving climate change
- * Best practices for making public EV chargers easy to use
- * Options for purchasing electric vehicles/chargers (including used electric cars, grants for chargers, and working with the school district to transition to electric school buses).

Speaking of resources: [Plug In America](#) provides an easy way to look up 40 models of EVs

We will also have an EV owner who will review their experience with owning, driving and operating this type of vehicle.

Plenty of useful tools and information will be shared, along with a Q&A for attendees.

To RSVP, please email SAC@eastgoshen.org.
